

Create Subfolder in Digital Ocean hosting (MDM)

1. Create a sub folder under the domain. Example: /var/www/mdm/lira . Here created folder named lira under the mdm.
2. Create a database using phpMyAdmin
3. Connet in termius and go to created sub folder.
Example: `cd /var/www/mdm/lira`
4. Download latest WordPress zip file using termius.
Command: `curl -O https://wordpress.org/latest.tar.gz`
5. Unzip the [latest.tar.gz](https://wordpress.org/latest.tar.gz) file.
Command: `tar xzvf latest.tar.gz`
6. Create .htaccess file.
Command: `touch /tmp/wordpress/.htaccess`
7. Copy the wp-config-sample.php file and rename it wp-config.php.
Command: `cp /var/www/mdm/lira/wordpress/wp-config-sample.php /var/www/mdm/lira/wordpress/wp-config.php`
8. Create upgrade folder under wp-content.
Command: `mkdir /var/www/mdm/lira/wordpress/wp-content/upgrade`
9. Move all file folder from wordpress folder to lira folder.
Command: `sudo cp -a /var/www/mdm/lira/wordpress/. /var/www/mdm/lira`
10. Update the ownership.
Command: `sudo chown -R www-data:www-data /var/www/mdm/lira`
11. Update the file folder permission.
Command: (a) `sudo find /var/www/mdm/lira/ -type d -exec chmod 750 {} \;`
(b) `sudo find /var/www/mdm/lira/ -type f -exec chmod 640 {} \;`
12. Generate salt key and put it in wp-config.php file using wincp.
Command: `curl -s https://api.wordpress.org/secret-key/1.1/salt/`
13. Set up wp-config.php using database name, user name and password.
14. Put this code `define('FS_METHOD', 'direct');` in wp-config.php file and save the file.
15. Hit the url and setup wordpress admin settings.
